FOR IMMEDIATE RELEASE

LAT RELEASES CASE STUDY ON SUCESSFULL LAT-STENA IMPLEMENTATION
Economy, Security, Efficiency Are Some Of The Unique Advantages of LAT-Stena For Libraries

SOMERDALE, NJ, January 28, 2011: Library Automation Technologies, Inc. (LAT), a leading provider of automation products for libraries, is pleased to announce an in-depth case study documenting a successful LAT-Stena installation. Analyzing existing security issues, coupled with an overwhelming demand for dispensing media by staff, the case study documents internal decisions made to implement this unique technology in the library.

“LAT-Stena offers unparalleled capability to increase security, improve efficiency and optimize staff performance in dealing with media”, said Oleg Boyarsky, President and CEO of LAT. “LAT-Stena is a ‘game-changing’ technology, and this case study is yet another reason for libraries to consider it.” said Boyarsky.

Despite recent cuts in library budgets, the demand for new and easily accessible optical media content (books, movies, music, games) has been steadily growing in the libraries throughout the country and abroad. LAT-Stena™ is a unique, flexible system designed to maximize security, while simplifying staff handling of dispensing this media to the public. Infinitely expandable to support any capacity media collection, LAT-Stena™ works on existing circulation desk computers, and allows multiple staff simultaneous access to the massive media-store that LAT-Stena™ offers.
